Personal Projects

Emergency App

- Android application implemented using Flutter SDK, Google Maps API, Flutter SMS and Firebase.
- It helps the users in distress to find the nearest available emergency service using geolocation.
- It also helps the users to send an alert SMS to their registered contacts.

Hospital Management System

- Desktop application implemented using python tkinter and SQLite3 database.
- It manages the operations of a simple hospital (Like maintaining Medicine stocks, managing doctor appointment, Prescription handling and others).

Achievements

- 1st place in General Quiz held at PSG College of Technology (2020).
- 2nd place in Inter College Coding Event held at PSG College of Technology (2020)

Interests

Quizzing, Machine Learning, Web and Mobile Development, Data Science, Blockchain
